

Sierra Leone Health Outcome: Life Expectancy Trend

Strategic objective: resilient, responsive and equitable healthcare, with an ambition to end Malaria, HIV/AIDS and TB as public health threats by 2030.

Life expectancy trend, years

2017 to 2025 shows a major improvement by 2025 after a flat/slight decline between 2017 and 2023.

Policy interpretation for IGR scorecard

The 2025 improvement suggests progress in health outcomes, but the scorecard should track whether gains are sustained through stronger primary healthcare, disease prevention, maternal and child health services, and reliable health financing.

Recommended scorecard signals to track next

- 1

Health financing resilience
Reduce over-dependence on donor support for core services.
- 2

Disease burden reduction
Monitor Malaria, HIV/AIDS and TB progress toward SDG 3.3 by 2030.
- 3

Equity and access
Track rural/urban access, affordability, and quality across life stages.
